

ImageProcessingSiteScreenshots

Page · Tag

The project demonstrates a working NodeJS service

The screenshot displays a Visual Studio Code editor interface. The main editor window shows the `server.js` file with the following code:

```
29
30
31 /*****
32 app.get("/filteredImage", async (req, res) => {
33     const image_url = req.query.image_url
34
35     // Validate image_url is provided
36     if (!image_url) {
37         return res.status(400).send("image_url is required");
38     }
39
40     // Validate URL format
41     try {
42         new URL(image_url);
43     } catch {
44         return res.status(400).send("Invalid URL format");
45     }
46
47     try {
48         const filtered_path = await filterImageFromURL(image_url);
49         res.status(200).sendFile(filtered_path, (err) => {
50             deleteLocalFiles([filtered_path]);
51         });
52     } catch (error) {
53         console.error("Error processing image:", error);
54         res.status(422).send("Could not process the image")
55     }
56 }
```

The bottom panel of the editor shows the **TERMINAL** tab. The terminal output is as follows:

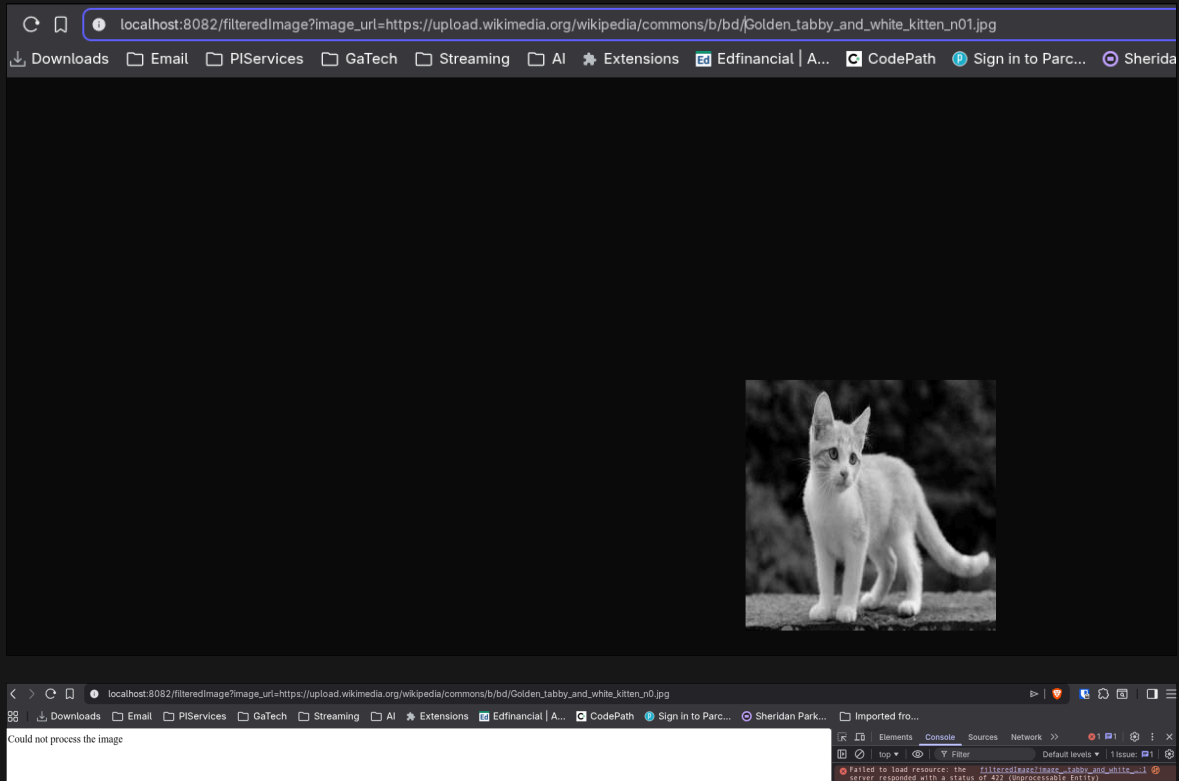

```
~/Udacity-Full-Stack-App-AWS/cd12099-Full-Stack-Apps-AWS-main/project starter code main
v20.20.2 16:59
> npm run dev
> api@1.0.0 dev
> node --watch server.js

server running http://localhost:8082
press CTRL+C to stop server
```

The project demonstrates RESTFUL design principles

- In Code

The project demonstrates an appropriate use of HTTP status codes

The project uses AWS Elastic Beanstalk's CLI and Console Dashboard

```
34) ap-southeast-5 : Asia Pacific (Malaysia)
(default is 3): 1

Enter Application Name
(default is "project starter code"): image_filter_app
Application image_filter_app has been created.

It appears you are using Node.js. Is this correct?
(Y/n): Y
Select a platform branch.
1) Node.js 24 running on 64bit Amazon Linux 2023
2) Node.js 22 running on 64bit Amazon Linux 2023
3) Node.js 20 running on 64bit Amazon Linux 2023 (Deprecated)
(default is 1): 3

Alert: You chose a deprecated platform branch. It might not be supported in the future.

Do you want to set up SSH for your instances?
(Y/n): n
```

```

> eb create
Alert: You chose a deprecated platform branch. It might not be supported in the future.

Enter Environment Name
(default is image-filter-app-dev): image_filter_app
Environment name must be 4 to 40 characters in length. It can only contain letters, numbers, and hyphen
s. It can not start or end with a hyphen
Enter Environment Name
(default is image-filter-app-dev): image-filter-app
Enter DNS CNAME prefix
(This will be part of your environment URL: prefix.region.elasticbeanstalk.com)
(default is image-filter-app):
Your environment will be accessible at: image-filter-app.us-east-1.elasticbeanstalk.com

Select a load balancer type
1) classic
2) application
3) network
(default is 2): 2

Would you like to enable Spot Fleet requests for this environment? (y/N): N

2.0+ Platforms require a service role. We will attempt to create one for you. You can specify your own
role using the --service-role option.

```

The screenshot shows the AWS Elastic Beanstalk console for the environment 'image-filter-app'. A yellow warning banner at the top states: 'Deprecated platform: This environment uses a deprecated platform branch. We recommended that you upgrade to a supported platform branch. A deprecated branch may have a scheduled retirement date. It still receives ongoing maintenance updates. [Learn more](#)'. Below this, the 'Environment overview' card shows the environment is 'Ok', with details for Environment ID (e-pj5qyaayrd), Domain (image-filter-app.us-east-1.elasticbeanstalk.com), and Application name (image_filter_app). The 'Platform' card shows 'Node.js 20 running on 64bit Amazon Linux 2023/6.10.3' as a deprecated platform. The 'Events (28)' section lists recent activities: 'Environment update completed successfully', 'New application version was deployed to running EC2 instances', 'Instance deployment completed successfully', and 'Deploying new version to instance(s)'. The left sidebar shows navigation options like Applications, Environments, and Recent environments.

The project includes functional cloud deployments
